Configuration Reporting and Auditing Tools Development, Maintenance, and Re-engineering

Client

Ecora is the leader in change and configuration management software solutions supporting IT control, compliance, and security.

Solution

Ecora® Software automates configuration reporting, auditing, and change tracking across the enterprise. With a few mouse clicks, solutions for internal security monitoring, disaster recovery, audits, compliance management, and business continuity become easy and cost-effective to implement and maintain. The software installs onto a single administrative desktop and is operational within minutes without the introduction of server agents. Reports are automatically generated in HTML, DOC, CSV, and Visio to provide greater flexibility and an unparalleled view of the enterprise.

Key Features of Ecora's Configuration Auditor

- baseline reporting, essential for ensuring security and maintaining compliance to standards;
- change tracking for thousands of key settings;
- full scheduling capability on all data collection and reports; dozens of built-in project-specific reports;
- summary reports; and Visio diagrams.

Key Features of Ecora's Configuration Reporter

- automatic configuration data discovering;
- automatic generation of detailed configuration reports that increase the efficiency of audits, troubleshooting, migrations, and technical training.

Auriga's Contribution

- **Configuration Auditor for Microsoft IIS Servers**
 - Development of the Configuration Data Collecting Module
- **Configuration Auditor for Microsoft SQL Servers**
 - Development of the Configuration Data Collecting Module
- **Configuration Auditor 3.0 (next generation product)**
 - Co-development of the System Core
 - Co-development of the Fact Finding Module
 - Development of the Consolidated Change Logs Utility

Implementation

- OS's: MS Windows NT 4.0/2000/XP
- Languages and tools: MS Visual C++ 6.0, C++
- Technologies: COM/DCOM, ADSI, ADO, ODBC
- Databases: MS SQL 7.0/2000
