Award-winning Web Analytics Solution— Development and Maintenance

Client

Pilot Software, Inc. is a long-time business intelligence vendor that now focuses on operational performance management. In 1986, Pilot built the first client/server EIS system. The BI applications, developed by Pilot Software, were recognized as innovative solutions with complex logic and powerful user's interface. Ventana Research has praised PilotWorks® for its advanced and balanced capabilities not found in BI products from such authorities as Oracle, SAP, Cognos and Hyperion (2006).

Pilot's rich history of leadership has garnered worldwide recognition for Pilot Software's technology, including most recently being named to the DM Review 100 list as one of the top 100 performance management companies. Pilot has collected the largest deployments of performance management in both commercial organizations and in the United States federal market.

Pilot was recognized by Intelligent Enterprise magazine as a 2006 Company to Watch. SAP AG acquired Pilot Software in February 2007 and Pilot Software's product, PilotWorks, has been rebranded SAP Strategy Management

Solution

Pilot HitList is a sophisticated Web site analysis solution for companies with growing Internet initiatives. Pilot HitList is the only Web site analysis solution in its class with a wide variety of collection methods, including its unique network collector that collects data at the network, resulting in more accurate analysis.

In addition, Pilot HitList's DataLink™ technology integrates enterprise-wide data for more meaningful business reporting and analysis. With accurate information and insight at their fingertips, team members across your enterprise can respond more rapidly and intelligently to Internet data.

Key Features

- A new intuitive user interface;
- Pilot HitList's network collector;
- Intuitive path reporting graphics;
- Breadth of data collection methods;
- Easily customizable reports;
- Rapid installation and minimal maintenance;
- Over 100 pre-packaged reports;
- Familiar Windows® user interface;
- Browser-based interface;
- DataLink™ feature;
- Support of Windows XP, Oracle 9i, SQLServer 2000 and DB 7.2.

Auriga's Contribution

- Software development for HitList;
- Full support of HitList versions 4.7, 4.8, and 5.0.

Implementation

MS Visual Basic, MS Visual C, IntsallShield, Visual Build, Perforce, SQL Server, Oracle, DB2
