

Executive Information Systems— Development and Maintenance

Client

Pilot Software, Inc. is a long-time business intelligence vendor that now focuses on operational performance management. In 1986, Pilot built the first client/server EIS system. The BI applications, developed by Pilot Software, were recognized as innovative solutions with complex logic and powerful user's interface. Ventana Research has praised PilotWorks® for its advanced and balanced capabilities not found in BI products from such authorities as Oracle, SAP, Cognos and Hyperion (2006).

Pilot's rich history of leadership has garnered worldwide recognition for Pilot Software's technology, including most recently being named to the DM Review 100 list as one of the top 100 performance management companies. Pilot has collected the largest deployments of performance management in both commercial organizations and in the United States federal market.

Pilot was recognized by Intelligent Enterprise magazine as a 2006 Company to Watch. SAP AG acquired Pilot Software in February 2007 and Pilot Software's product, PilotWorks, has been rebranded SAP Strategy Management

Solution

Pilot Decision Support Suite (PDSS) is one more EIS that tuns corporate data into valuable information fueling corporate growth. Corporations across a broad spectrum of industries use Pilot DSS to help them access the information stored in their data warehouses. Pilot DSS is time intelligent, which enables all users to analyze corporate data over specified time periods quickly and efficiently. Time intelligence helps you compare and segment analyses by meaningful increments of time such as calendar and lunar month, weekdays vs. weekends as well as make year-over-year comparisons.

Pilot DSS runs in both Windows and browser environments, and gives extensive suite of reports that deliver in-depth analyses and assist in measuring corporate and market performance without programming.

Pilot BusinessAnalyzer has the same award-winning technological superiority and rich functionality for which Pilot Suite has always been known, but with a name that better reflects its value: to help you analyze corporate data and transform it into more profitable business decisions. For growing organizations looking for a cost-effective business intelligence solution that provides robust analysis, true scalability and unwavering performance in a zero-maintenance environment now and in the future, Pilot BusinessAnalyzer delivers.

Key Features

- Pilot's powerful analytics server;
- An intuitive browser-based interface;
- Pilot Excel Add-in;
- Library of Pre-Built Analysis Templates.

Auriga's Contribution

- Several analytic applications based on Pilot DSS that are built in conjunction with the vertical domain experts made available for immediate deployment in a variety of situations. These industry-specific solutions offer predefined analysis objects to help generate customized applications.
- Development and support of all client applications (Model Builder, Designer, Web-based Pilot Excel Addin, etc.) is fully performed by Auriga.

Implementation

MS Visual C++, Excel, Oracle, SQL Server, DB2, Red Brick
